About the Group

IMAGINOX stands for a group of Czech production and realization companies that bring a unique concept and top-level quality to the world of well-being. Three production and one planning company are united under this brand to offer the maximum possible level of individualization to private clients and to collaborate with architects and business partners who share the same love for modern design and technology. IMAGINOX designs wellness projects for which it produces tailor-made stainless steel pools, whirlpools, saunas, steam rooms, movable pool floors, and other wellness products and accessories.

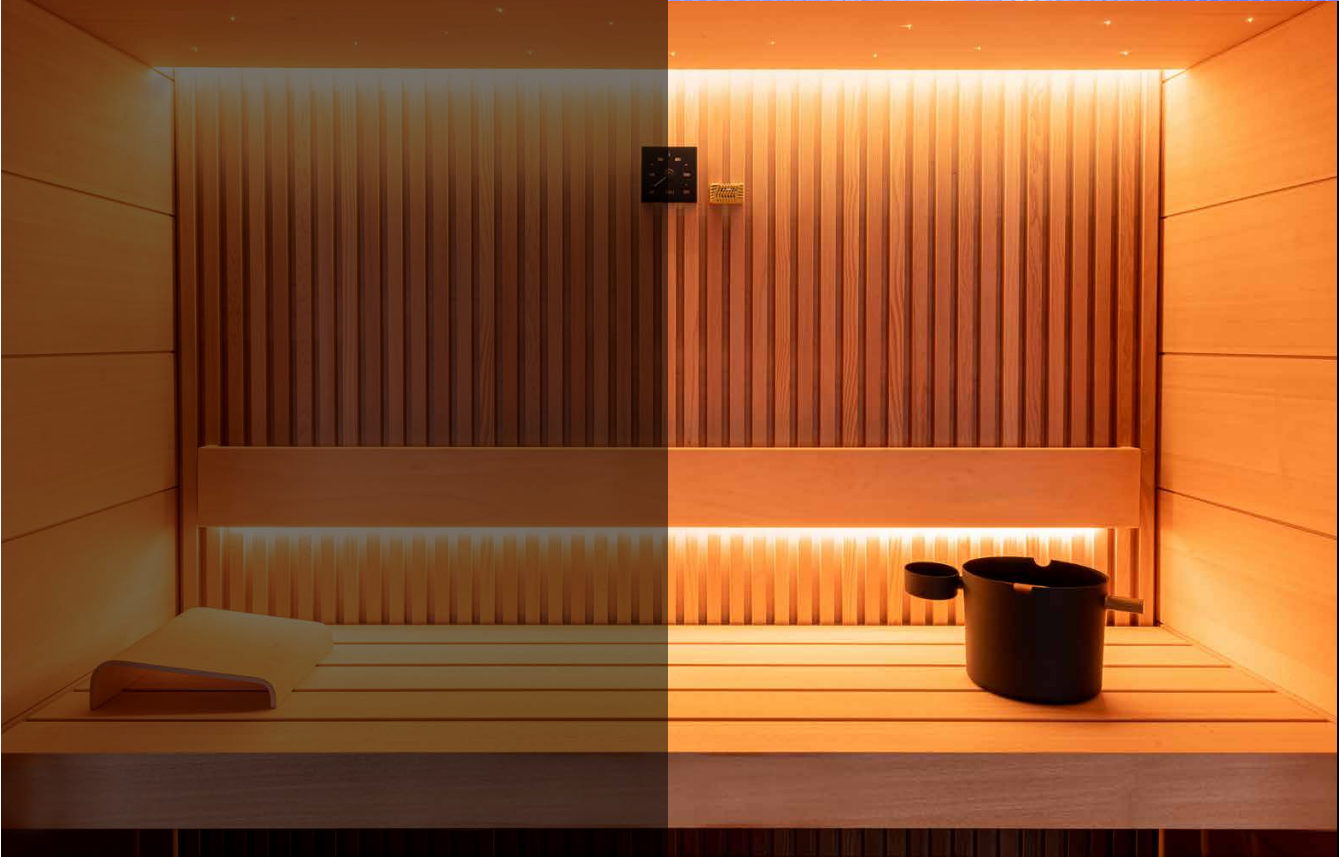

Stainless Steel Pools & Whirlpools

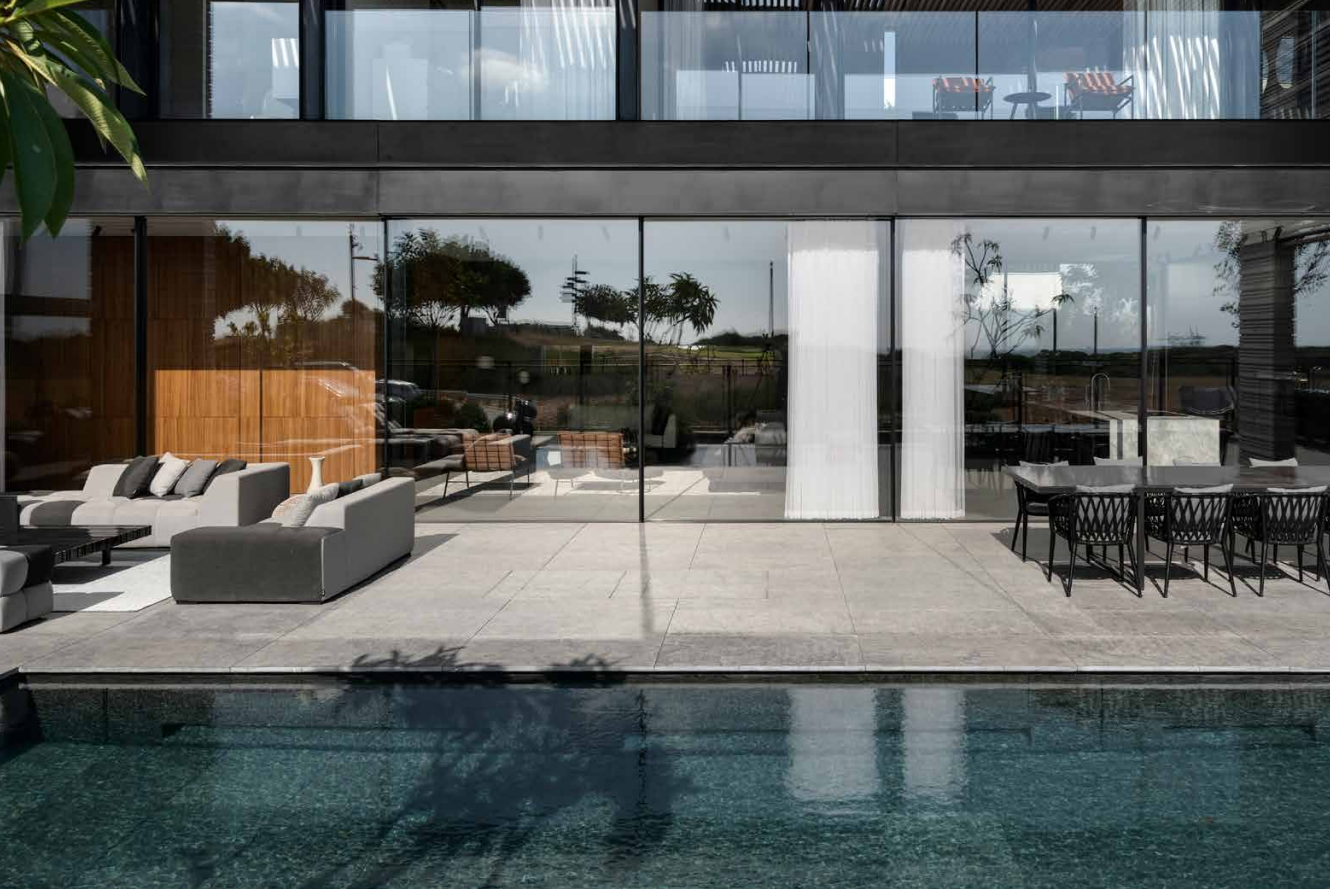

Stainless steel pools, whirlpools, and other wellness products by IMAGINOX POOLS stand for modern design and top quality. Production from stainless steel gives endless possibilities for customizing every project according to the client's wishes and needs. Shapes, sizes, equipment, location, or original elements, such as glass walls or a starry bottom, each aspect of the future pool can be tailored to your imagination.

Saunas & Spas

TAO brand Finnish saunas and steam cabins offer high quality, premium design, and flawless operation for private clients and commercial spas. Saunas by TAO reflect the tradition of handcrafted production and the beauty of natural materials in thoughtful designs tailored to each project. Every sauna is made to meet the last detail of the client's wishes.

Movable Pool Floors

The IMAGINOX production portfolio is complemented by movable pool floors by the AQUAFLOORS brand. This is a luxurious and innovative way of covering the pool using the latest technology. At the same time, AQUAFLOORS introduces an elegant solution for efficiently using the space on the terrace or garden, bringing individualized solutions tailored to individual projects.

Why IMAGINOX?

At IMAGINOX, we provide a comprehensive approach to wellness and spa implementations. Our goal is an individual approach to every client and every project detail to achieve maximum client satisfaction. Flexibility towards clients and business partners is always our top priority, and every wellness project is completely custom-made.

Our strength lies in our extensive range of comprehensive services, covering every aspect of wellness project realization: from initial project planning to in-house production, assembly, and aftercare. All thanks to close cooperation within the group and its experienced team of project managers, designers, architects, engineers, production and installation staff, and technology experts.

Over the years, IMAGINOX has been building a network of business partners and dealers that is constantly growing, thanks to which we realize projects not only in Europe but also in the Middle East and Asia.

Wellness Design

Because wellness design is not only about selling high-quality wellness products, IMAGINOX offers complete wellness solutions from planning to the aftercare service and support during the entire process of wellness implementation. With years of experience, IMAGINOX provides personalized solutions for private and commercial clients.

Stainless Steel Pools & Whirlpools

Stainless Steel Pools

Stainless steel pools from IMAGINOX POOLS stand out for their quality, long life, and easy maintenance. Stainless steel is known for its noble and hygienic properties but at the same time as a material with a clean appearance. Stainless steel pools are a minimalist design element suitable for private gardens as well as premium commercial wellness and spa facilities.

IMAGINOX's own stainless steel production enables the maximum possible level of individualization. Most projects are tailored to the client's space, wishes, and needs. IMAGINOX POOLS increasingly focuses on innovative, technologically advanced, and design-advanced projects in Europe and Asia, such as glass pools, pools with a starry sky on the bottom, and other features according to customers' imagination or wishes.

Circulation System

Skimmer Pools

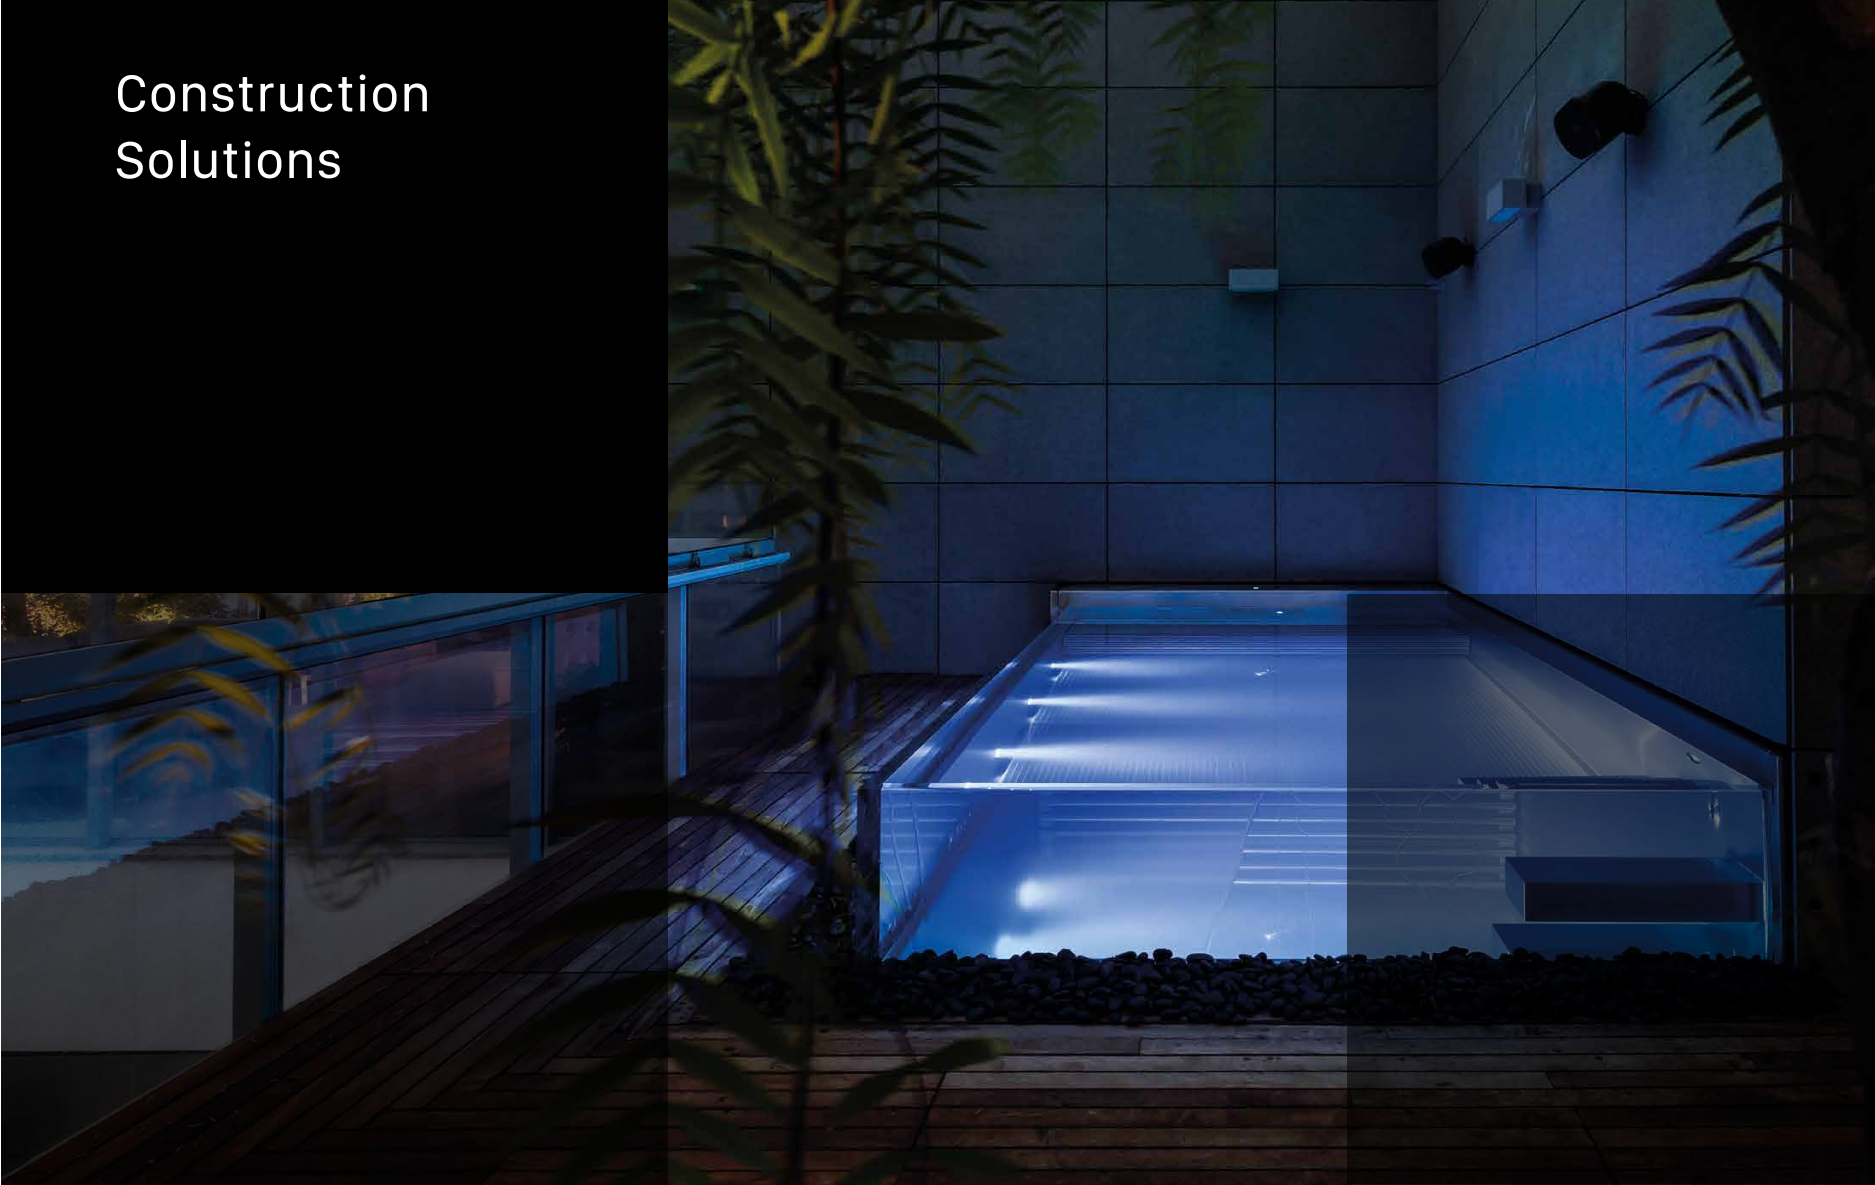

Skimmer pools are a popular choice for private outdoor and indoor installations. These pools have a water level slightly below the edge, with a filtration system that uses a surface collector (skimmer) to direct water to a sand filter. That's why skimmer pools are easier to maintain. Additional advantages include quicker installation and lower space requirements. Skimmer pools are also quieter and more cost-effective compared to overflow models.

Deck-level Pools

In most European countries, deck-level pools are the only legal option for commercial facilities. This filtration system circulates water over the pool's edges, ensuring the equal and effective capture of impurities, and perfect cleanliness maintained even during heavy use. Deck-level pools are also popular for private projects, often favored by demanding customers and architects. They offer a visually stunning effect with the water level parallel to the pool edge, creating an endless water appearance. Their infinity edge variant is popular.

Construction Solutions

Compact Pools

IMAGINOX compact pools are advantageous due to their quick installation and lower cost. They are fully welded and equipped in the production hall, then transported in one piece to the installation site, making them ideal for outdoor installations. Compact pools are thermally insulated and can be individually equipped with arbitrary water features.

Q-System Pools

Q-System customized pools offer the possibility of individually tailored production but still make the realization easier and quicker. Installation of the Q-System pools is quick thanks to pre-prepared technological units that can be easily assembled and welded on-site. They are suitable for custom-sized pools with a flat bottom placed in the ground, both outdoors and indoors.

X-System Pools

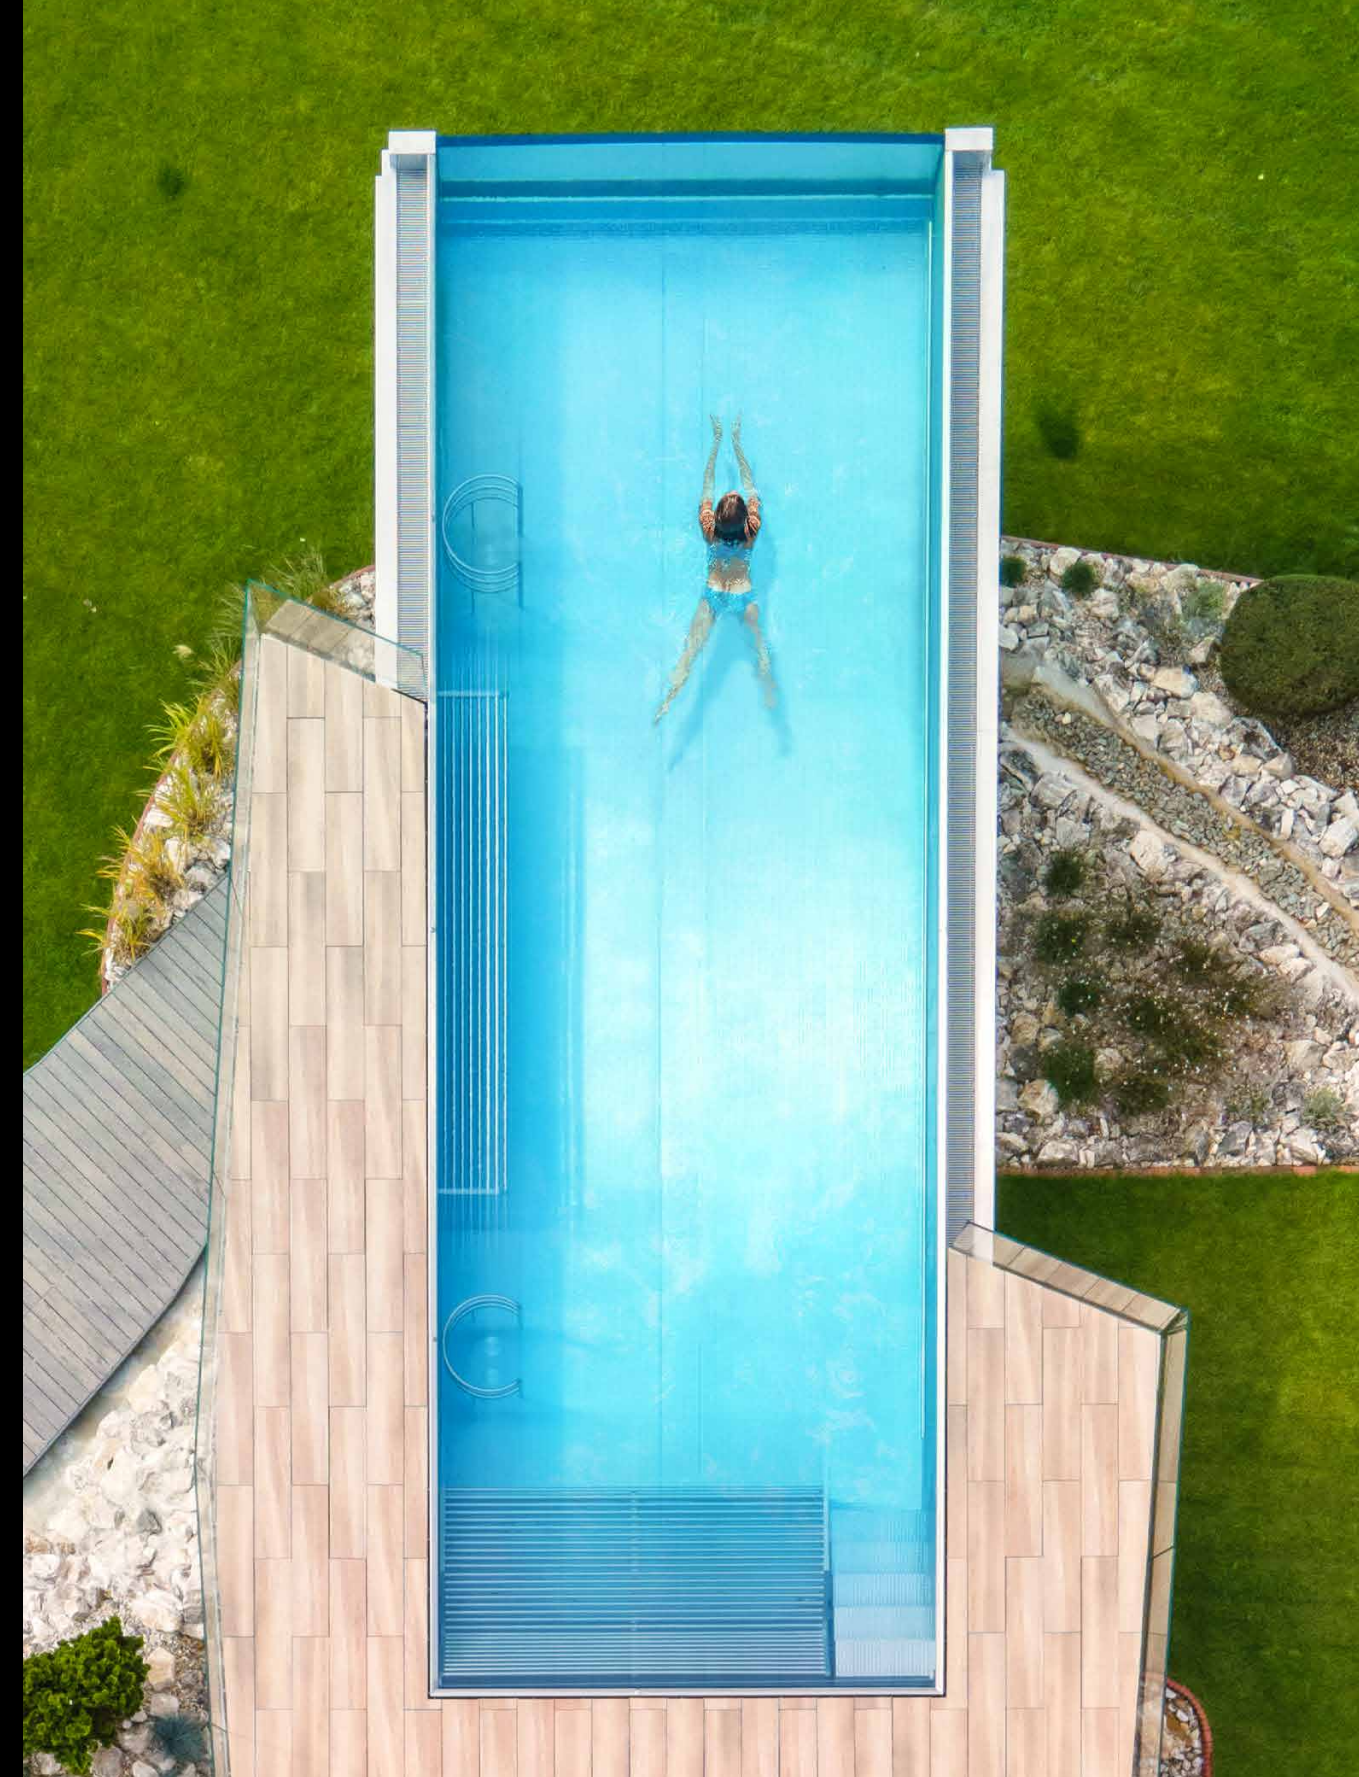

The X-System is the choice for technologically advanced projects that are exceptional in their design solution and complexity of requirements. The pool is prepared entirely for the specific space and then welded on the site. A very popular option is a pool with a negative edge, a gradually sloping bottom, or in combination with other types of materials, such as glass or stone.

Pool Equipment

Well-chosen additional equipment significantly enhances the overall impression and comfort of your pool. A wide range of features is available, including common ones like lighting, countercurrents, massage jets, many types of waterspouts, and other components, allowing you to personalize your pool. But you can encourage premium design with glass walls, starry bottoms, or chilled walls. Families with children appreciate pools with paddle pool areas, safety railings, and retractable walls.

Important equipment for every pool, especially outdoor ones, is a pool cover. A pool cover helps maintain water cleanliness and reduces heating costs. Based on your requirements, you can choose from a range of common pool covers, like lamella or sliding covers. Or you can decide on modern high-tech systems AQUAFLOORS.

Whirlpools

Stainless steel whirlpools are highly popular due to their customizable options to meet clients' needs. Several standardized models offer quick and easy installation with the potential for individual modifications. However, most often clients choose custom-made solutions, allowing for adjustments in shape, size, and equipment. You can also combine massage seats and loungers and add hydro-massage and air nozzles as desired.

Whirlpools can be preassembled in the production hall and transported as a whole, or, for hard-to-reach areas, transported in parts and welded on-site. Available in both skimmer and overflow designs, they are suitable for private and commercial use. All IMAGINOX whirlpools are well-insulated against heat loss, which makes them ideal for outdoor installations as well.

Wellness Products

In addition to stainless-steel pools and whirlpools, we offer various wellness products for both private and commercial use. Our range includes popular features like the Kneipp path for foot massage in warm and cold water, plunge pools for cooling down after a sauna, cooling buckets, experience showers, and more. We can plan and create a customized solution for your individual wellness needs.

Saunas & Spas

Finnish Saunas

The Finnish sauna is one of the most popular wellness treatments today. We relax at temperatures of 60-100 °C and low humidity of around 3%, which facilitates sweating. Regular sauna bathing strengthens immunity, detoxifies the organism, regenerates the body after physical activity, helps against insomnia and migraines, and improves mental health.

With TAO, you can enjoy all of the sauna's benefits in a premium-design cabin. With a simple modern style, a choice of several types of wooden paneling and heating systems, and the possibility of adaptation to the given space, including adaptation to a window, sloping attic ceiling, or rounded wall, Finnish saunas by TAO are ideal for private and commercial operations. Each TAO sauna is custom-made to fit the client's space and wishes.

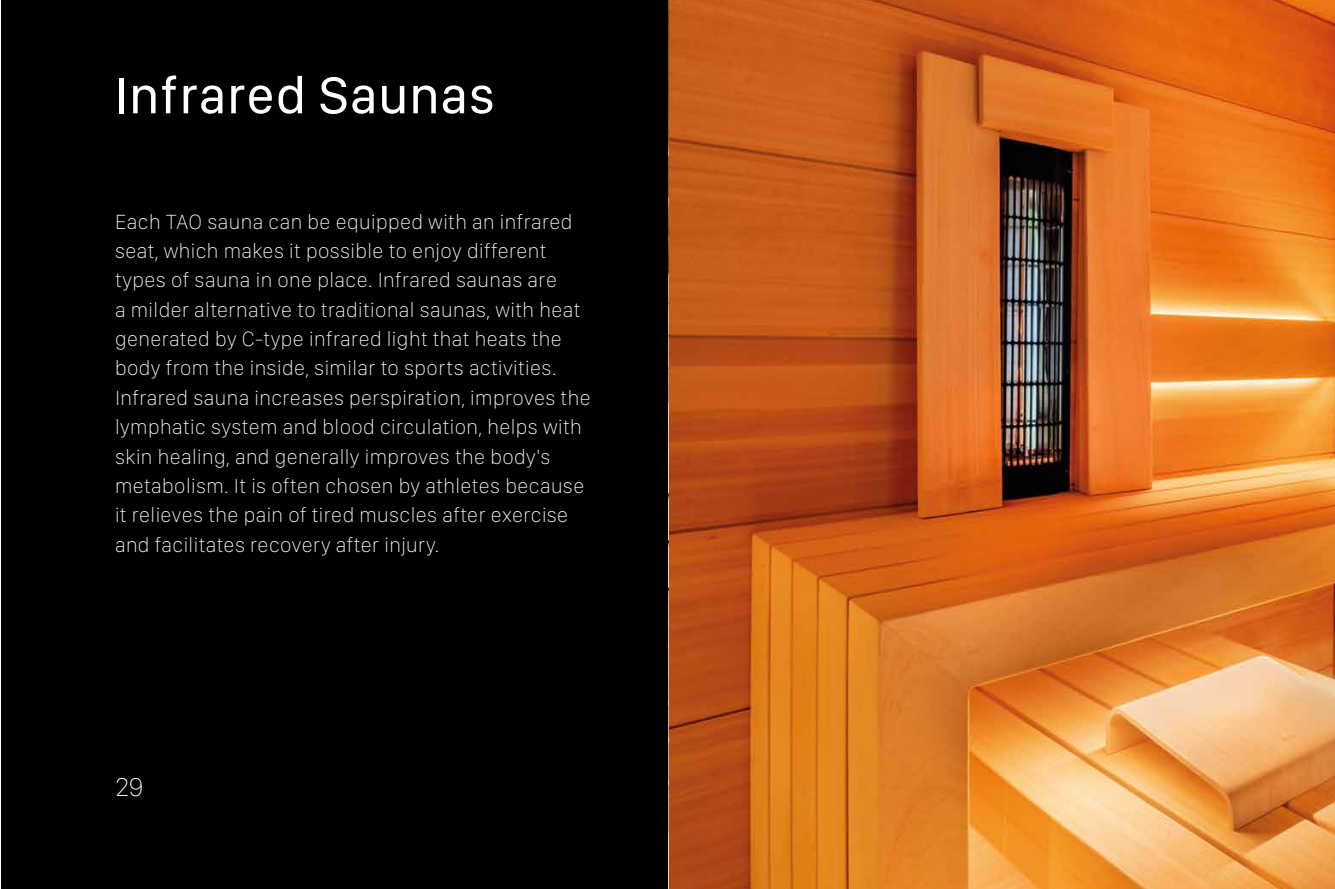

Bio Saunas

The bio or combined sauna is equipped with a sauna stove supplemented by one or two vaporizers. The temperature in a bio sauna is lower than in a dry Finnish sauna, usually in the range of 45-60 °C with humidity between 40-55%. Therefore the stay in the bio sauna can be longer, usually 15-30 minutes. A bio sauna creates a wetter and milder climate suitable for whom the conditions of a Finnish sauna are adverse. The conditions in the bio sauna have a positive effect on health; they help especially in the treatment of high blood pressure, and blood circulation disorders and improve the quality of the skin. It is considered gentler on the body and is often combined with aromatherapy.

Infrared Saunas

Each TAO sauna can be equipped with an infrared seat, which makes it possible to enjoy different types of sauna in one place. Infrared saunas are a milder alternative to traditional saunas, with heat generated by C-type infrared light that heats the body from the inside, similar to sports activities. Infrared sauna increases perspiration, improves the lymphatic system and blood circulation, helps with skin healing, and generally improves the body's metabolism. It is often chosen by athletes because it relieves the pain of tired muscles after exercise and facilitates recovery after injury.

Model Ranges

We offer five typified model ranges of Finnish saunas, each differing in appearance and basic equipment design. The advantage lies in the ability to combine design elements from each model, ensuring the final appearance of the sauna matches the client's vision. Alternatively, we offer completely customized sauna cabins tailored to every wish and idea, including non-traditional ones.

In the custom design option, clients can select the materials for interior and exterior cladding, bench width and type, sauna heater, and additional equipment. We assist in efficiently placing all elements to ensure proper sauna function and maximum comfort. For those seeking an exceptional sauna in terms of appearance, comfort, functionality, variability, or longevity, TAO products are the ideal choice.

TIRO

TIRO represents the basic model series of TAO saunas. You can choose from various options for internal and external cladding of the sauna, as well as glazing of part of the walls. The benches and headrests are made of high-quality abachi wood. The sauna can be equipped with sauna equipment from the TIRO design series according to the client's wishes. You can also choose underbench heating or backlighting of the backrests.

TRUST

The TRUST design series is the most popular model of TAO saunas. It offers a wider range of interior and exterior cladding, including glass walls. TRUST is a favorite for its ideal ergonomically shaped head- and backrests. The sauna is adaptable to spaces with windows or sloping ceilings and provides maximum flexibility in adapting the shape of the floor plan and dimensions. The model range includes the TRUST design series of sauna equipment and accessories.

CONTI

The CONTI premium design range offers an aesthetically balanced concept combining modern minimalism and coziness. Its sophisticated design won an international award. CONTI sauna thus becomes a masterpiece of your interior. At the same time, the CONTI sauna remains a functional and technologically advanced product. It offers the maximum possibility of individualization, adaptation to the size and shape of the space, and choice from a range of materials, types of lighting, and design sauna accessories from the CONTI series.

MSITU

The MSITU model series represents the traditional design of the Finnish sauna accentuating the structure of solid wood. The rustic style is highlighted by the contrast with the minimalist sauna accessories, giving the space an authentic look. For an even more traditional feel, a grooved bench surface option is available. On the other hand, the clean geometric lines of the benches and backrests give the sauna a modern look. The overall atmosphere is complemented by subdued lighting and the option of an open glass entrance area.

GLAMP

GLAMP is a model range of TAO outdoor saunas. The outdoor sauna can be implemented as a separate cabin or as part of a wellness house with an entrance hall and shower. Every sauna house is individually adapted to the space and needs of the client. The interior of the outdoor sauna can be selected from our range of model series of indoor saunas, or we can adapt it to your requirements. The outdoor sauna house is suitable for both private and commercial use.

Sauna Equipment

The sauna equipment includes technology that ensures its proper functionality as well as design accessories that are an inherent part of a sauna. The first is the material choice that affects not only the design but also the correct functionality and comfort of the sauna. For interior wall cladding and benches, you can choose wood from our offer or decide on individual solutions. You can improve the premium appearance of your saunas with niche or stone panels on walls. External cladding is always chosen individually for each project.

The heart of every cabin is the sauna heater. It is important to choose the right type of heater for each cabin. There are Finnish heaters, combined heaters for bio saunas, and commercial heaters for busy operations or sauna rituals. Heater models vary in size, number of olivine stones, and placement, from standard free-standing heaters to under-bench options.

An essential part of the sauna is the control panel. TAO saunas use the latest technology to ensure greater comfort, durability, and safety. You can also control your sauna remotely using a mobile application or connect it to a smart home.

The price of each sauna includes the basic equipment: a thermometer, an hourglass, and a bucket with a scoop for watering the stones. Some other accessories and technologies can expand the functions of your sauna or turn it into a place for perfect relaxation. A sauna can be decorated with designer lighting or a starry sky, or you can have it supplemented with an infrared seat.

Steam Baths

Steam cabins are a popular alternative to traditional saunas. We can relax here in high humidity, up to 100%, and lower temperatures of around 45 degrees. The steam bath has a beneficial effect on our health, especially the respiratory tract and skin. It effectively helps with regeneration, detoxification, and prevention of colds. A relaxing atmosphere also has a pleasing effect on your mood, especially in a cabin designed to your wishes.

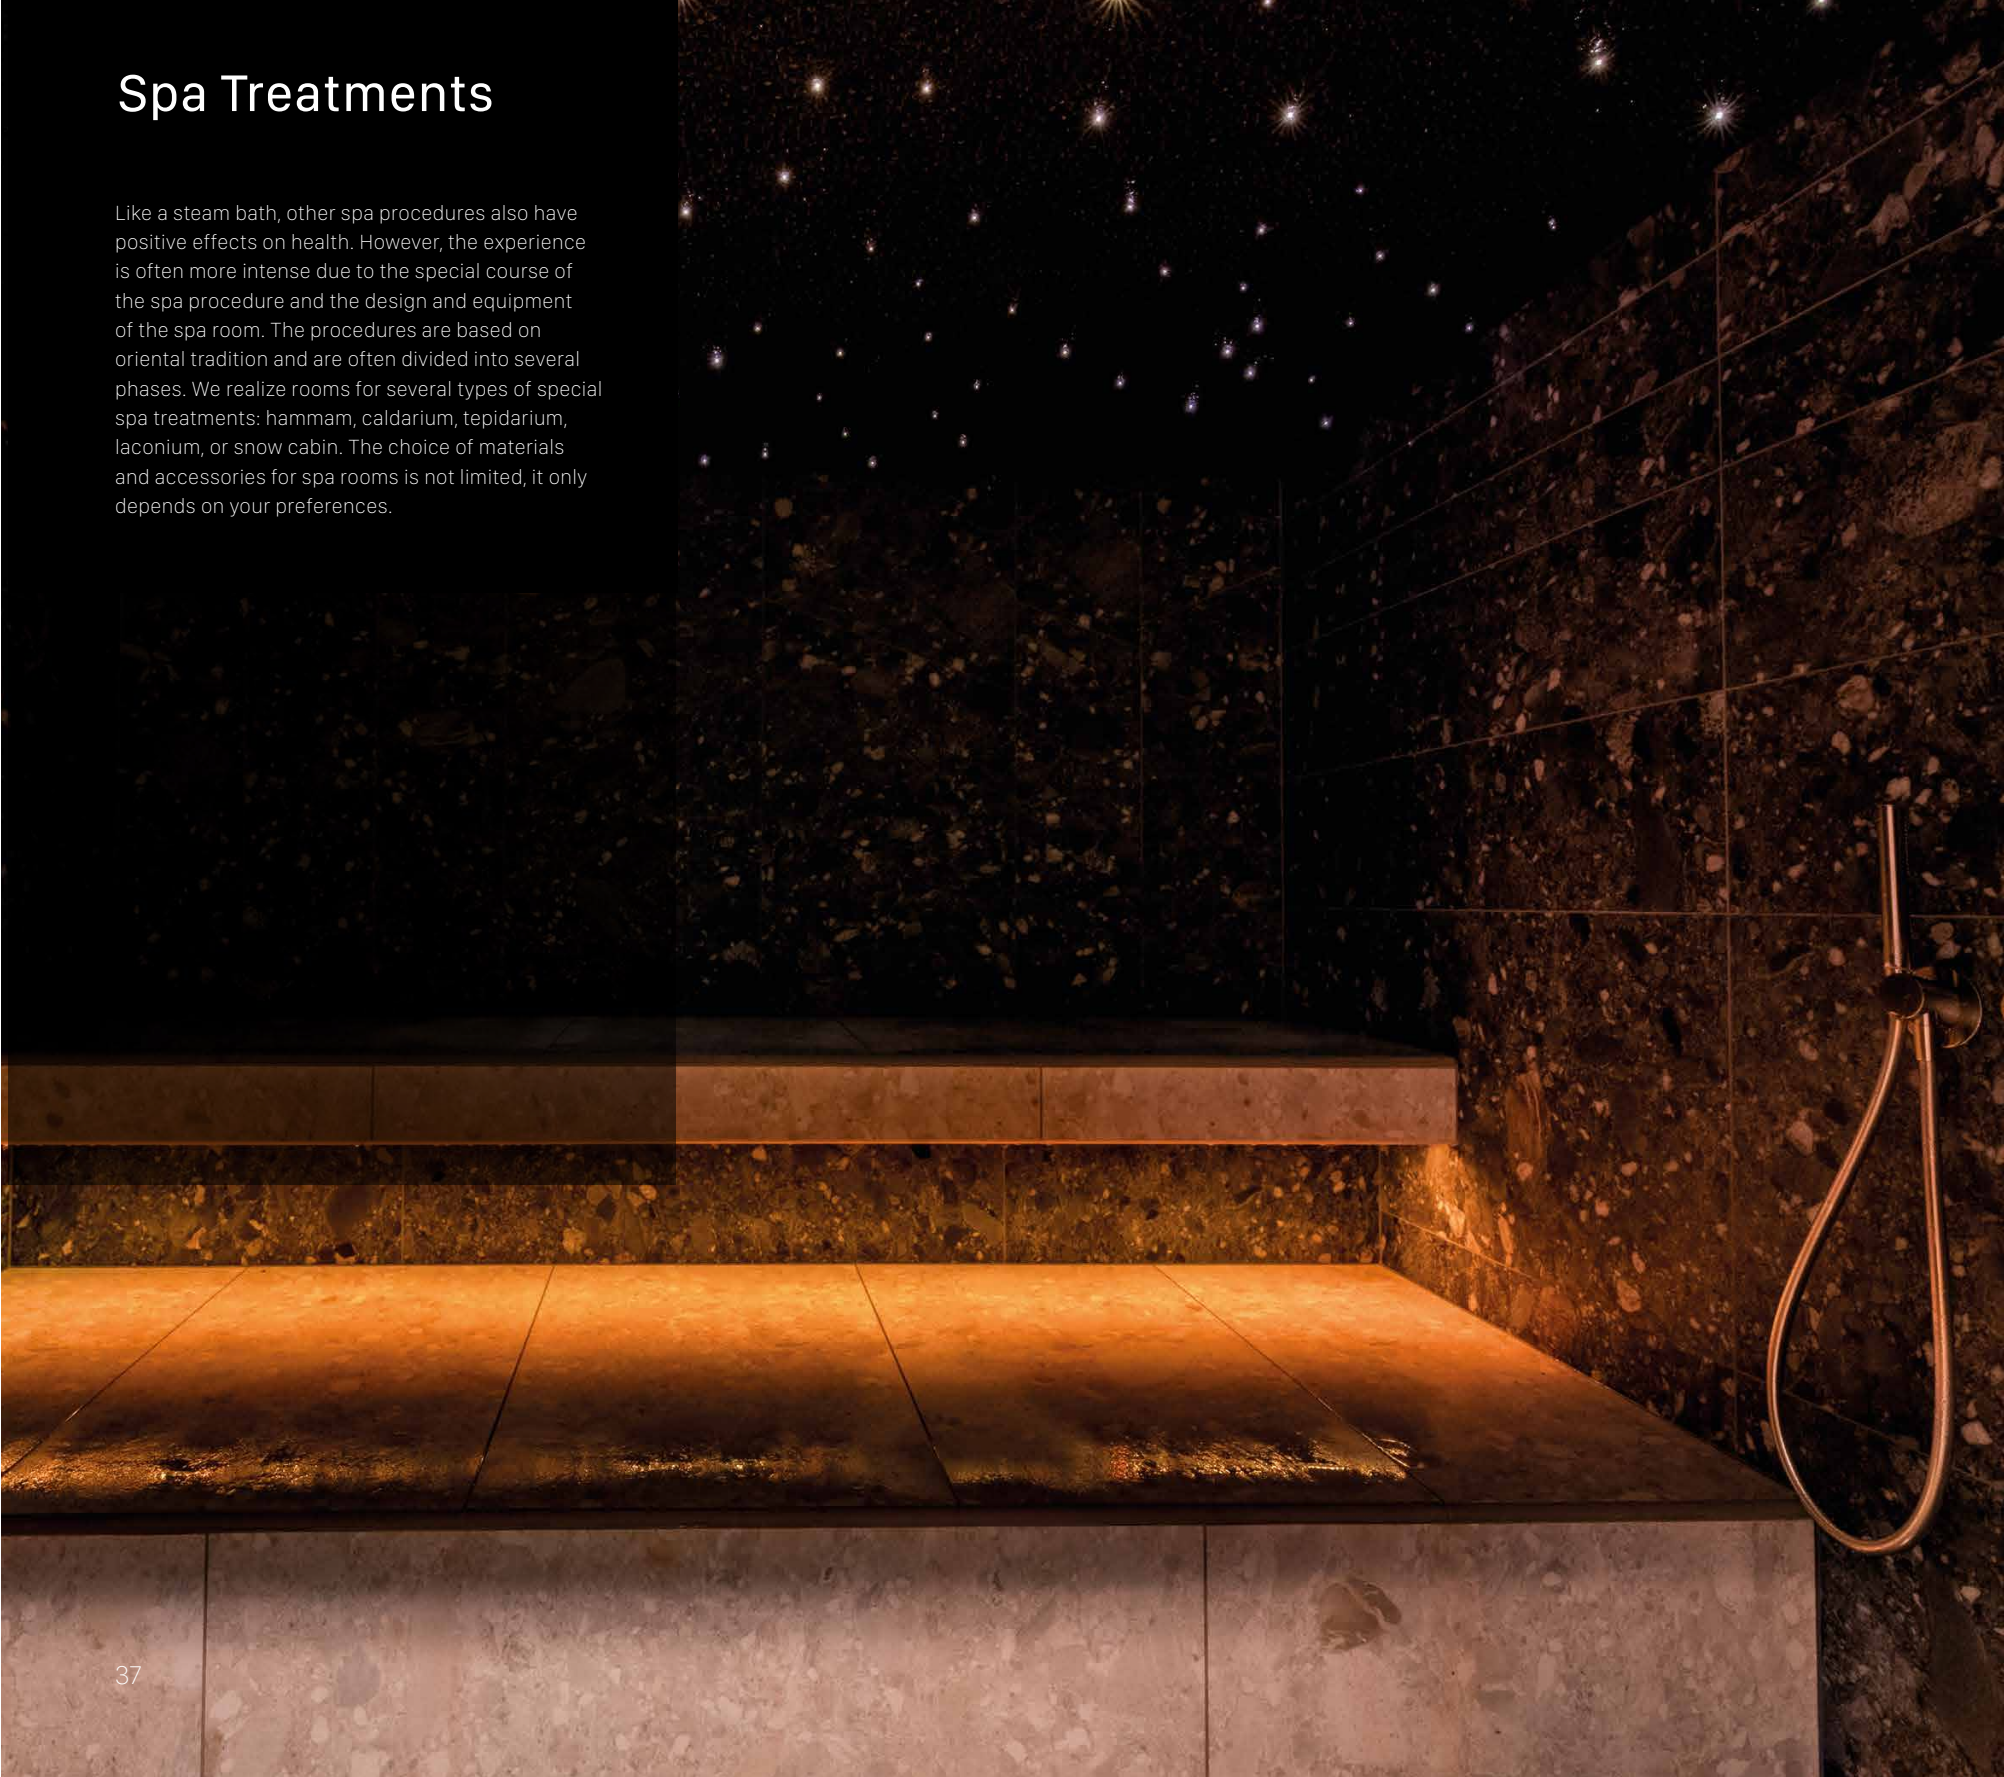

Each steam room is tailored to the client's wishes and can be fully adapted to any space or individual requirements. You can choose the dimensions, design, location of benches, and types of vaporizers. There is a wide offer of materials suitable for the realization of a steam cabin, including special tempered glass, natural stone, mosaic, and ceramic tiles in various colors and designs.

The appearance of the steam room can be enlivened with stylish lighting, decorative paintings, or exclusive-looking stone cladding. An interesting element of the design of the spa room can also be art objects on the walls of the cabin, which can be made of metal, ceramics, and other materials.

Spa Treatments

Like a steam bath, other spa procedures also have positive effects on health. However, the experience is often more intense due to the special course of the spa procedure and the design and equipment of the spa room. The procedures are based on oriental tradition and are often divided into several phases. We realize rooms for several types of special spa treatments: hammam, caldarium, tepidarium, laconium, or snow cabin. The choice of materials and accessories for spa rooms is not limited, it only depends on your preferences.

Movable Pool Floors

Vertically Movable Pool Floor

A vertically movable pool floor combines a timeless design with modern technology and represents an elegant solution for covering the pool without demands on the surrounding space. This system makes it possible to set any depth in the pool, from a children's paddling pool to a swimming pool. When the floor is fully raised and the pool is closed, the floor increases the terrace or relaxation area. Automatic control ensures safe and easy handling, the system can also be connected to a smart home.

A movable pool floor is the most modern and luxurious pool cover solution of these days. It works basically like a lift. During lifting, the water naturally overflows under the bottom, when it is lowered, it is forced back above it. Thanks to its high load capacity, the covered pool can be used as part of a terrace or living space. It offers various cladding options, and design including stairs and rest benches and do not limit the use of water accessories and attractions.

Advanced Technology

The movement of the pool floor is provided by a hydraulic system hidden under the floor. The structure is made of chemically resistant stainless steel 316L and its overall strength allows the load of the raised bottom to be up to 200 kg/m². The floor is controlled by buttons on the control panel, or the system can be connected to a smart home and controlled remotely via a mobile app. Thus you can enjoy a family lunch on the terrace and swim there later.

Closed Pool

Open Pool

Sliding Terrace

A sliding terrace is a practical and aesthetic addition whose wood cladding can be harmonized with the appearance of your house or terrace. The minimalist aesthetic is compatible with various designs of gardens or houses. The main advantages of a sliding terrace include safety, convenient operation, and efficient use of outdoor space. The variable options of cladding materials, spatial arrangement, and opening allow integration into any exterior. The terrace can be individually supplemented with integrated LED lighting, raised to cover the sunken whirlpool, or adapted to an overflow pool with an infinity edge. Easy service of the components ensures the long-term service life of the sliding terrace.

The terrace can be installed on both newly built and existing pools, while it is possible to adapt it to different types and sizes of pools. Manipulation is simple. The terrace can be moved manually or fitted with a motor. It moves on small rails embedded in the ground to avoid interfering with walking. The terrace can be connected to a smart home and controlled using a mobile application.

Specification

The construction of the sliding terrace is made of solid aluminum, which also facilitates manual handling. The facing material can be matched with the exterior, while the side edges can be faced with the same wood, aluminum, or a combination thereof. The sliding terrace provides thermal insulation and protects against the penetration of dirt and rainwater into the pool. The construction includes aluminum frames with stainless steel joints and waterproofing and thermal insulation boards.

The terrace moves on rails that can be on the surface of the floor or embedded in the ground, while the rails can be adapted to a greater load. The standard load capacity of the sliding terrace is around 200 kg/m². The opening can be adapted to the space of the garden: along the shorter side of the pool, along the longer side of the pool, or the longer side to both sides.

Wellness Solution

Individual Wellness Solution

Our integrated manufacturing resources, planning, and projection departments allow us to deliver individual solutions for wellness zones with custom-made products. We implement commercial spas as well as increasingly popular private wellness zones and regularly cooperate with architects, developers, and construction companies. Our goal is to ensure superior quality from initial concept to project completion and thus maximum customer satisfaction. We provide our clients with professional planning, including 3D visualizations, a wide range of wellness products made to measure by us, and support during the entire implementation process, including aftercare.

Private Projects

Private wellness facilities are increasingly becoming part of family homes. Therefore, in conjunction with our company, Aquamarine Spa, we also specialize in customized wellness solutions for home relaxation. Luxury wellness products, professional planning, and a sense of design are the basis for creating relaxation spaces, which, with their arrangement, equipment, and choice of materials and colors, form a harmonious whole. Our experienced architects and designers will help you create the ideal wellness retreat in your home.

Cooperation with Architects

Whether it is our architectural expert, partner architectural studio, or client's architect, we are here for professional consultancy in wellness projects. We always provide maximum flexibility and focus on finding the right solution for each wellness and spa design. We help with the preparation of project documentation, consult on the selection of materials and the placement of products, and ensure the subsequent production, import, installation, and connection of wellness products.

Commercial Projects

We offer complex planning and realization of public wellness zones for hotels, fitness centers, or spas. You can rely on our proven expertise, an individual approach to your needs, and compliance with safety regulations. We will fine-tune your project to the smallest detail, whether it is the design of the relaxation area, the selection of tiles and lighting by our architects, or the delivery of other wellness products such as heated relaxation loungers, showers, or other wellness accessories.

Project Realization

Working with IMAGINOX

The first step usually starts with a personal meeting in one of our showrooms or directly at the place of implementation. First, we will find out what scope of work you are interested in, prepare a non-binding price offer and, if interested, create 3D visualizations or ensure cooperation with our architects.

Once the contract is signed, we will start creating drawings of individual products. Based on these drawings, your contracted construction company will prepare the construction work according to our requirements. In the last phase, we start the production of the products and then their assembly, which in most cases takes place directly on site.

Finally, there is the official handover of the project, during which we will put the delivered products into operation, train you in their use and maintenance, and hand over all the necessary documentation.
